

Transport request Add-on

Are you familiar with these problems?

Do you import transport requests into your test systems for quality assurance?

Do you have several test systems that you need to supply?

Do you want to exclusively lock customized objects until testing is complete?

Do you create transports of copies manually? Or do you always release the original transports?

Do you want a constant number of transports for production systems?

The manual effort for creating transports of copies is too high for you?

Transport request Add-on

The challenge

For quality assurance, you import software transports with DDIC objects and Customizing settings into test systems. When the original transports are released, the object locks are lost in the SAP standard. This creates the risk that further changes are made to the affected objects, resulting in inconsistencies. Manually created copies of the transport process are not a practical alternative. The time required is simply too high.

With the **transport request Add-on** you comfortably create automated transports of copies in a 1-step procedure: After selecting an open task, the automatically created transport of copies is imported into a test system. Thus, the customized Workbench objects remain exclusively locked until development and testing are complete. The tool can be imported into your development system without modification, and the footprint is minimal. The application uses only one API layer in the SAP system. You can set whether versions are generated or not.

Our solutions offer

The **transport request Add-on** supports you in creating, releasing and importing transports of copies automatically. Various filter functions support you in your search. In addition, the add-on remembers your last request in a history, so that you can always continue working at the point where you left the application before.

The **transport request Add-on** has seamless integration into the SAP standard and creates real added value for your ERP system. You define yourself which target systems are available in the customizing options supplied. In addition, you can define per user whether versions should be created or not.

We are happy to offer you a demo on our SAP system. Call us or write to us.

We are here for you.

Our offer Transport request Add-on
